According to **Dr. Francis V. Panno**, Professor and Division Head of the Department of Restorative & Prosthetic Sciences at New York University College of Dentistry, the **Easy Pneumatic Crown and Bridge Remover** will break the seal on **any type of bonding cement**. Elastic cements tend to retract back to the starting point when time is spent recalibrating an instrument or preparing it for another "strike". The **rapid and repeated action** of the **Easy Pneumatic Remover** prevents the cement from reseating itself.
