- Replacement Tips**
Specify:
- | | |
|---------------------------|--------|
| Interproximal Bridge | Tip #1 |
| Single-Crown Straight | Tip #2 |
| Single-Crown-Contra-Angle | Tip #3 |

According to Dr. Francis V. Panno, Professor and Division Head of the Department of Restorative & Prosthetic Sciences at New York University College of Dentistry, The Easy Pneumatic Crown and Bridge Remover will break the seal of any type of bonding cement. Elastic cements tend to retract back to the starting point when time spent recalibrating an instrument or preparing it for another “strike”. The rapid and repeated action of the Easy Pneumatic Remover prevents the cement from reseating itself.
